

April 30th, 2026

Dear Gleason Lake Residents,

The GLIA is working with Midwest Aqua Care, Inc. to implement an aquatic herbicide control management plan to reduce the invasive species, Curly-Leaf Pondweed, in the lake adjacent to your home.

Given MN DNR approval, a herbicide treatment will take place when water temperatures range between 50-60 degrees (*recommended*).

Target species: Curly-Leaf Pondweed

Herbicide application. Chemical product yet to be decided, but Aquathol K, or Reward Herbicide(s) will be the product considered to control CLP. Total acreage and polygon layout will determine best product to use.

You may request control (treatment) NOT occur adjacent to your property by contacting Midwest Aqua Care, Inc directly:

Kevin Eckstam
1924 W 200th St
Jordan, MN 55352
952-403-6879 (office)
612-210-3507 (cell)

Feel free to contact MAC with any questions or concerns.

Thanks,

Kevin Eckstam
(President)
